

# Air Compressors

The case is made of high-quality ZL 102 aluminium alloy with a streamline design yet heat dissipation is more effective. Driven by an electrical magnetic motor it adopts straight-line reciprocal motion to produce air. Also has SF3 type material for the cylinder and piston which is of low power consumption, large air output and high air pressure. Due to it's Non-oil lubricating design, the compressed air is also purified. All units run on 230V 50/60Hz.
