

FiltoMatic

- Integrated UVC clarifier
- Integrated pump system for sludge discharge
- Multi-function digital control panel with temperature display

A pioneering filter technology innovation:
An automatic self-cleaning filter that autonomously monitors virtually all of the loads that can upset the balance in the pond, and thus ensures clean water – 365 days a year. With the intelligent control unit the UVC clarifier is activated manually or automatically and the filter is cleaned by the sludge pump that is also contained in the filter.
