

Multi-jet Spray Bar

A highly effective nozzle which gives an even distribution of water across walls of any surface leaving a thin film of water to shimmer down the wall. Light these up with LED strip lights for an even more spectacular yet elegant look.

-  Easy to install
-  Easy to hide away
-  Minimal splash effect (varies on smooth to rough surfaces)
-  Easily adjustable angle

Mylar Lace

Raindrop Lace Fountains provide a display where drops of water flow from an upper vessel, down a Mylar transparent lace to a lower pool.

EXAMPLE

The fountain pool is located on the 7th floor of the America's Mart building, with a double ring of mylar lace interleaved with side glow fiber optic spanning two floors to the roof. Around the perimeter of the fountain pool are fog nozzles lit by hidden LED strips. Inside the lace are aerating nozzles lit by special annular LED lights. All fountain pumping equipment is located on the floor below.

WATER QUALITY

Water quality is monitored by an electronic system and is purified by ozone generator (odor free). The incoming water is reverse-osmosis filtered to prevent any hard water deposits from fouling the appearance of the lace and fiber.
